VIOLA PEDATA

In shale and sandy soil, even in the gravel hillsides, one finds the narrowly-divided, finely-cut leaves and the beardless blossom of the Bird's-Foot Violet (*Viola pedata*) pale blue and with a heart of gold. The large, velvety, pansy-like blossoms and the unusual foliage which rises in rather dense tufts are sufficient to distinguish the plant from its numerous kin. Frequently the Bird's-Foot Violet blooms a second time in autumn, a delightful eccentricity of this family.

In cultivation (in rock gardens and nursery) the writer has had specimens in bloom from early spring until frost.

DENDRIUM BUXIFOLIUM (Leiophyllum)

This curious little evergreen, like a miniature box-bush, is typical of the rockery. It is a hardy, densely-branched shrub, sometimes procumbent, with small glabrous, opposite or alternate crowded leaves. Small white or pink and white flowers. It resembles the Dwarf-Box, and is well adapted for borders of evergreen shrubberies and rockeries, sometimes forming dense tufts from 1½ to 2 feet in diameter.
